西川 寛来

2026-04-08

スライドはこちら

- https://nissinbo.github.io/RwPL_1_tea/

自己紹介

- 西川寛来
 - 製薬業界で修行中
 - LinkedIn
 - GitHub

こんな話をします 🙌

- teal とはなにか
- “あの日の CRAN” を使う
- OSS contribution について

teal とはなにか

teal

- Shiny で治験データ分析ダッシュボードを作るための R パッケージ
 - GitHub
 - Roche/Genentech 社の **Insights Engineering** が開発
- teal を用いた FDA submission の検証が行われた
 - Submission Pilot 2, Shiny app
 - Submission Pilot 4, Shiny app

活用場面

- データモニタリング
- 照会事項対応
- 事後解析
- 探索的な解析
- (将来的には) 承認申請

 治験データのダッシュボードでやることは多い

製薬企業の採用事例

- GSK
 - PHUSE US Connect 2024
- Sanofi
 - PHUSE US Connect 2025
- BMS, JnJ, Sanofi, Roche
 - PHUSE Working Group Events

これ以外にも事例は増えている印象。日本でもやっていきましょう

teal で作った Shiny はこんな感じ 🙋

teal.gallery efficacy

The screenshot shows a web browser window displaying a Shiny application titled "My first teal app" by "NEST @ Roche". The browser tabs include "Simplenote", "Efficacy Analysis Teal Demo App", and "Patient Profile Analysis Teal Den". The address bar shows the URL "rinpharma.shinyapps.io/nest_efficacy_stable/".

The application interface includes a top navigation bar with "Module (15)" and "Report" dropdowns. Below this, the breadcrumb "Home / Kaplan Meier Plot" is visible. On the right, there are buttons for "+ Add to Report" and "Show R code".

The main content area is divided into three panels:

- Active Data Summary:** A table showing data for ADSL and ADTTE datasets.
- Encodings:** A section for selecting datasets, endpoints, and variables.
- Facet Plots by Dataset:** A section for selecting variables to facet plots by.

The "Active Data Summary" panel contains the following table:

Data Name	Obs	Subjects
ADSL	99/400	99/400
ADTTE	495/2000	99/400

The "Encodings" panel shows the following settings:

- Datasets: ADSL, ADTTE
- Select Endpoint Dataset: ADTTE
- Filter by: OS Overall Survival
- Analysis Variable: Select AVAIL
- Censor Variable: Select CENS
- Facet Plots by Dataset: ADSL
- Select Treatment Variable: Dataset: ADSL
- ARM Description of FX
- Compare Treatments: ☐

A message box in the center of the plot area states: "Some inputs require attention. A reference arm must be selected. An analysis variable is required. A censor variable is required."

At the bottom left, a notification bar indicates "Disconnected from the server." with a "Reload" button and a progress bar showing "0:00 / 1:19".

実装の雰囲気

```
app.R
1 # load libraries
2 library(teal)
3 library(teal.modules.general)
4 library(teal.widgets)
5 library(sparkline)
6
7 # teal_data object
8 data <- teal_data()
9 data <- within(data, {
10   ADSL <- teal.data::rADSL
11   ADTTE <- teal.data::rADTTE
12 })
13 join_keys(data) <- default_cdisc_join_keys[names(data)]
14
15 # initialize the app
16 app <- init(
17   data = data,
18   modules = modules(
```

- 治験データで行われる分析手法をモジュールとして利用可能
 - 裏では **tern** パッケージが動いている

teal を使うメリット

インタラクティブな探索

- ユーザー自身でフィルタの操作や、カスタムレポートを出力
- 解析部門の負担を減らし、エンドユーザーの満足度を高める

コード管理による効率性と再現性

- 試験間での横展開がしやすい
- アプリ上の操作を再現する R コードを出力

モジュールによる標準化

- 生物統計に特化しており、要求に素早く対応
- ダッシュボードの作り方を揃えやすい

モジュールの探し方

- teal.modules.* のパッケージで各モジュールが利用可能
 - teal.modules.general, teal.modules.clinical

teal の歴史を歩む

v0.16.0 -> v1.0.0 にメジャーアップデートした際の Changelog を見てみる

teal 1.0.0

CRAN release: 2025-08-20

Breaking changes

- The `reporter_previewer_module()` is deprecated and will be removed in the future release. The custom `server_args` values can be set using `options()`:
 - `teal.reporter.nav_buttons` to control which buttons will be displayed in the "Report" drop-down.
 - `teal.reporter.rmd_output` to customize the R Markdown outputs types for the report.
 - `teal.reporter.rmd_yaml_args` to customize the widget inputs in the download report modal.
 - `teal.reporter.global_knitr` to customize the global `knitr` options for the report.

Enhancement

- Improved the layout and appearance of the app using `bslib` components.
- General repositioning of key navigation components across the app:
 - Modules: The module navigation is moved from a nested tab selection to a "Module" drop-down selection. The module selection can be done from the nested button of modules.
 - Reporter: The Report previewer is no longer displayed as yet another teal module, it is placed inside a "Report" drop-down right next to the "Module" drop-down. The Report previewer is a modal that displays the added report cards. The "Report" drop-down also contains other global report options like download/load/reset the Report.
 - Teal Data Module: The UI created by the `teal_data_module()` is now placed inside a modal that can only be closed when it returns `teal_data`.

v1.0.0 で何が変わった？

「UI を大幅刷新、**bslib** 使ってレイアウト改善したよ」 とのこと

teal 1.0.0

CRAN release: 2025-08-20

Breaking changes

 - `teal.reporter.rmd_output` to customize the R Markdown outputs types for the report.
 - `teal.reporter.rmd_yaml_args` to customize the widget inputs in the download report modal.
 - `teal.reporter.global_knitr` to customize the global `knitr` options for the report.

Enhancement

- Improved the layout and appearance of the app using **bslib** components. 🧑🧑
- General repositioning of key navigation components across the app:
 - Modules: The module navigation is moved from a nested tab selection to a “Module” drop-down selection. The module selection can be done from the nested button of modules.
 - Reporter: The Report previewer is no longer displayed as yet another teal module, it is placed inside a “Report” drop-down right next to the “Module” drop-down. The Report previewer is a modal that displays the added report cards. The “Report” drop-down also contains other global report options like download/load/reset the Report.
 - Teal Data Module: The UI created by the `teal_data_module()` is now placed inside a modal that can only be closed when it returns `teal_data`.

UI を比べてみる

v0.16.0

v1.0.0

- めっちゃ変わった!!!
 - 全体的にモダンなデザイン
 - モジュール選択がタブからドロップダウンに
 - フィルタパネルの位置が変わった

“あの日の CRAN” を使う

バージョンを指定してインストールはできるけど...

パッケージのインストールには `pak::pak()` が便利です。使いましょう。

```
1 # バージョンを指定してインストール
2 pak::pak("teal@1.0.0")
```

- デフォルトでは **CRAN binary archive** から指定バージョンをインストール
- 指定したパッケージ以外は「本日の CRAN」を参照する
 - 依存パッケージはどうなる？
 - 複数パッケージをバージョン指定してダウンロードしたい時は？

😬 依存パッケージなども含めて“当時の環境”をそのまま再現したい

P3M とは？

- Posit Public Package Manager (P3M)
 - Posit 社が提供する パッケージリポジトリ
 - 指定した日付の CRAN snapshot を利用可能
 - Windows の例: <https://packagemanager.posit.co/cran/2025-08-21>

P3M を使って“あの日の CRAN”を使う

`pak::repo_add()` や `pak::repo_resolve()` で CRAN snapshot をリポジトリとして追加する

```
1 # パッケージのバージョンを指定すると、CRAN リリースの翌日の snapshot を参照する
2 pak::repo_add(CRAN = pak::repo_resolve("PPM@teal-1.0.0"))
3
4 # 直接日付を指定してもOK
5 pak::repo_add(CRAN = "PPM@2025-08-21")
6
7 # 指定した CRAN snapshot でインストール
8 pak::pak("teal")
```

 “あの日の CRAN” を使うテクニックは、製薬業界や承認申請周りで重要になりそう

OSS contribution について

teal に貢献してみよう

- コミュニティが活発
 - プレゼンテーション・ウェビナーも頻繁に開催
 - **Pharmaverse Slack** のチャンネルもある
- 機能追加の要望が多い
- バグ報告 (= 伸びしろ) もまだまだある
- 開発チームが親切で、初心者歓迎の雰囲気
- 他社の統計プログラマーとの協働の機会

OSS contribution の流れ

1. 興味のある issue を見てみる
 - good first issue から選ぶとよさそう
 - 例: `ggplot2` の deprecated な関数を置き換える
2. Fork して修正・動作確認
3. Pull Request 送信
4. レビュー対応 → マージ 🎉

PR を送ってみた

- data table の重複削除で余計な列が入る問題
- AE summary table のフィルタのバグ

些細な貢献だけど、自分が使っているツールを自分で改善する体験は楽しいし、モチベーションも上がる みたいなことを書く

まとめ

やっつけていきましょう

🍌 teal

- 治験データのダッシュボード作成に最適
- 多くの企業で採用実績あり
- エンドユーザーが自分でレポートを作れる
- P3M で“あの日の CRAN” を使おう

❤️ OSS contribution

- まずは good first issue から
- 自分が使っているツールを自分で改善できる

Enjoy 🙌
